# ServersKid

Image repositories of remote server.

# ServersKid

Get image files from master server's image repositories.

# ServersKid

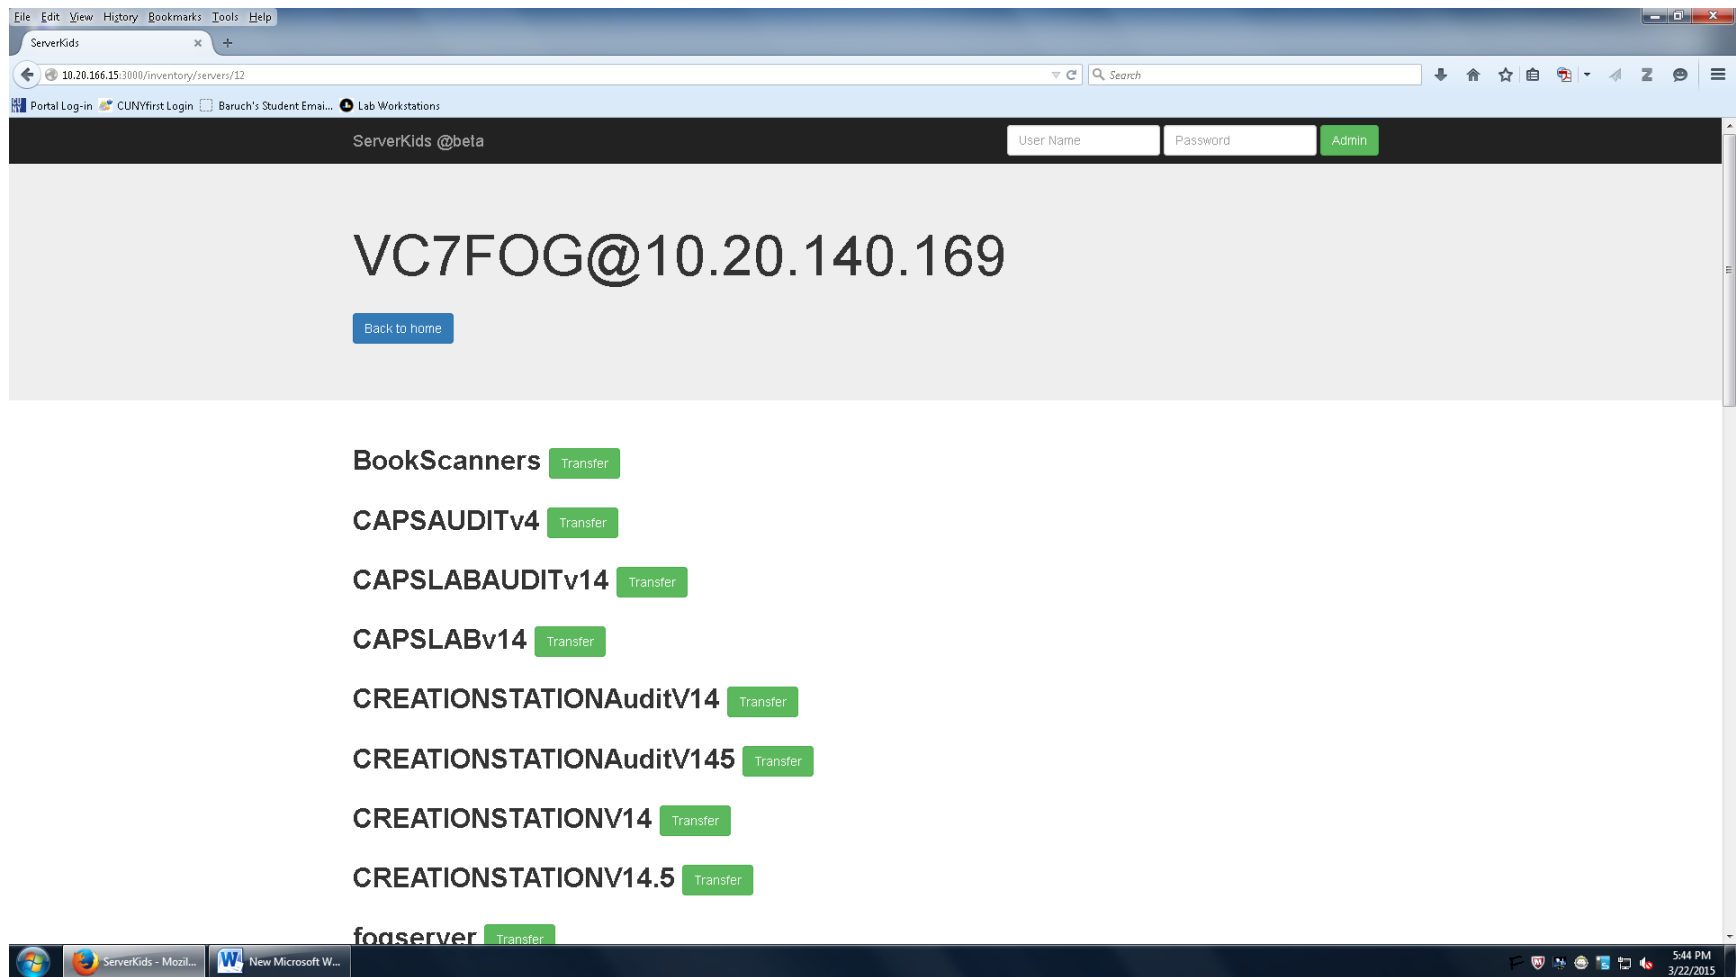

The screenshot shows a web browser window with the URL `10.20.166.15:3000/new`. The page title is "ServerKids @beta". At the top right, there are input fields for "User Name" and "Password", and a green "Admin" button. Below this is the "Add a Server" section, which contains five text input fields labeled "Server Name", "User", "Host", "Password", and "Password Confirmation". At the bottom of this section is a blue button labeled "Create a Server Controller".

Made in NYC | Code by YEN @ 2015

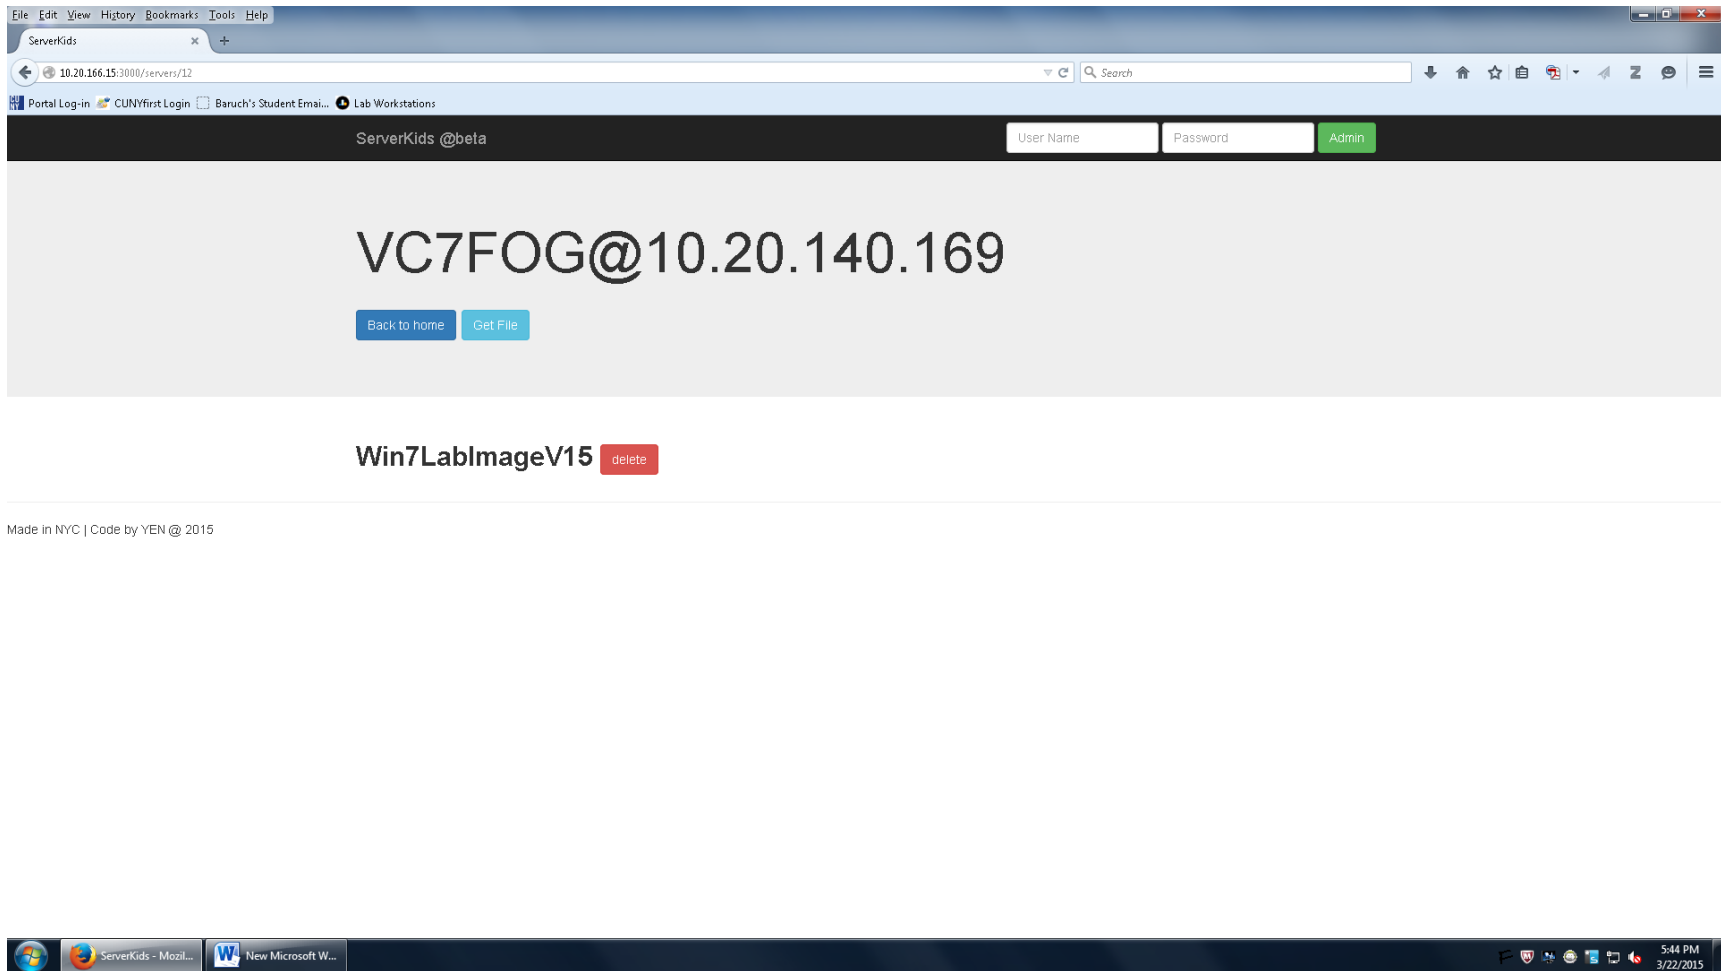

New an server instance for ServerKids.

# ServersKid

It works for every node of remote servers.

# ServersKid

And it is very easy to use.

**Thank You!**
